I have a simple question to those using SNOMED CT for microbiology tests. Looking for the concept for Intermediate brings up:

- 11896004 | Intermediate (qualifier value) |, which is not in the same sub-hierarchy as 131196009 | Susceptible (qualifier value) |, and
- 264841006 | Intermediately susceptible (qualifier value) |, which is subsumed by, and thus implies should anyone use the hierarchies, 131196009 | Susceptible (qualifier value) |.

Neither seem to be the perfect match for Intermediate as in SIR.

What do others use? <https://www.hl7.org/fhir/v2/0078/index.html> ?
